

Discover insights in an **instant**

Our new AI solution combines advanced technology with our broad, human-curated data to help you gain the insights you need with unprecedented speed.

Meet your new research companion, **Research AI**.

Your **shortcut** to lasting good decisions

From prompt to insight in seconds

Research AI delivers contextualized answers to your queries in just 15 seconds, connecting the dots for you.

Half human, half AI

Research AI combines the power of AI with our human intelligence, providing answers at speed with data you can trust.

Unique breadth of data

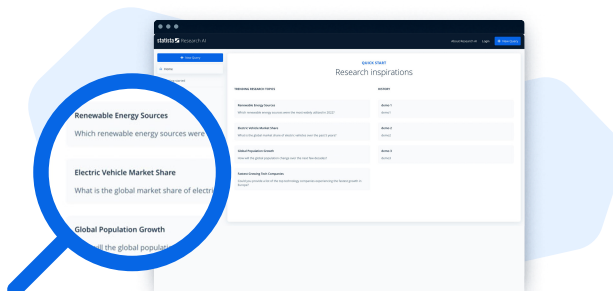

Our vast database of over 1 million statistics builds the backbone of Research AI, empowering unmatched insights.

How Research AI works

Initiating your query

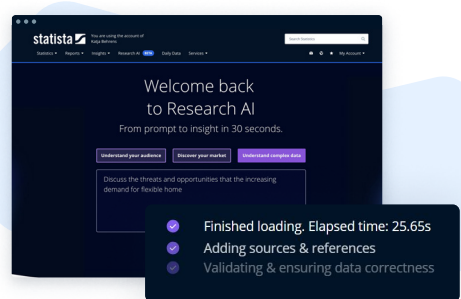

Research AI can assist with a variety of research questions. It can provide an overview of a topic, identify trends, or even explain abstract concepts.

You could ask: What is the global market share of electric vehicles over the past 5 years?

Query Tip

Make your query as precise as possible and **clearly state the results** you want to receive to get the most out of our product.

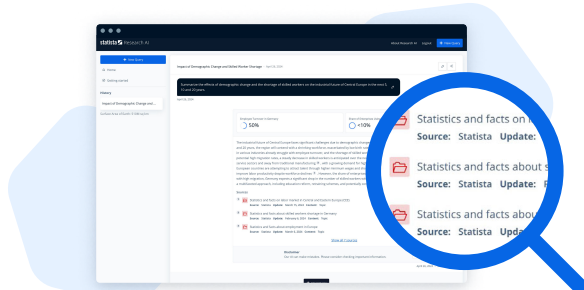

Searching for content

Utilizing semantic search technology, Research AI analyzes your question and scans our broad data platform, including all our statistics, infographics, and topic pages, to **find the most relevant data to answer your question.**

Crafting your answer

Research AI is connected to a Large Language Model (LLM) that generates natural language from prompts. Our tool feeds the extracted data and your query as a reformatted prompt to the LLM, which then **generates a written response to answer your question**, alongside up to 10 sources linked directly to our platform.

Key **features**

Source links

Easily understand and fact-check data with direct source links to our platform.

Query history

View all your past queries in one place for reference and seamless recall of information.

Query suggestions

Get inspired to further explore a topic with our extended query recommendations.

Content suggestions

Access even more data related to your query via additional content leading to our platform.

Limitations of Research AI

Our AI tool relies on verified content from reputable sources. However, we know that generative AI still has its limitations. We recommend always checking information against the original source before making important decisions. Our direct source links make fact-checking data as convenient as possible.
